

Modular Series DOI and Relationship Map

Canonical series index - [10.5281/zenodo.21420798](https://doi.org/10.5281/zenodo.21420798)

Abstract

This record is the citation and relationship index for the modular Finite Possibility Mechanics (FPM) research series. The six papers separate the mathematical foundation, executable reference, information dynamics, exact-ledger sandbox, phenomenological correspondences, and empirical tests into independently citable works. The public Python simulator and machine-readable audit results reproduce the computations used by Papers 01, 02, and 04. Every listed modular work is derived from the earlier unified monolith; derivation identifies provenance and does not replace the individual records.

DOI map

Record	Scope and persistent identifier
PAPER 01	FPM Foundations - Finite substrate, route ledger, local transport, and exact closure. 10.5281/zenodo.21420508
PAPER 02	Executable FPM - Reference runtime, numerical contract, and reproducible audit. 10.5281/zenodo.21420643
PAPER 03	Finite Carrier and Information Dynamics - Coherence, consolidation, information accounting, and finite allocation. 10.5281/zenodo.21420648
PAPER 04	Tensorless Exact-Ledger Sandbox - Deterministic integer policies and the boundary with reference FPM. 10.5281/zenodo.21420650
PAPER 05	Phenomenological Bridges - Declared correspondences with quantum, gravitational, and cosmological observables. 10.5281/zenodo.21420652
PAPER 06	Empirical Audit and Falsification - Evidence levels, reproduction standards, and decisive empirical tests. 10.5281/zenodo.21420655
SIMULATOR	FPM Reference Python Simulator and Audit Results - public source and machine-readable audit output; supplements Papers 01, 02, and 04 only. 10.5281/zenodo.21420735

Relationship key

Is derived from	Papers 01-06 and the simulator/result package identify the unified monolith as their source: 10.5281/zenodo.21352386 .
Is part of	Each modular paper and the simulator/result package belongs to this series index: 10.5281/zenodo.21420798 .
Supplements	The simulator/result package 10.5281/zenodo.21420735 supplements Papers 01, 02, and 04. No simulator relationship is asserted for Papers 03, 05, or 06.
